US-08-630-019A-18/C
; Sequence 18, Application US/08630019A
; Patent No. 6015710
; GENERAL INFORMATION:
; APPLICANT: Wright, Woodring E.
; APPLICANT: Piatyszek, Mieczyslaw A.
; APPLICANT: Oresy, David
; APPLICANT: No. 6015710ton, James C.
TITLE OF INVENTION: Modulation of Mammalian Telomerase by
TITLE OF SEQUENCES: 46
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: TOWNSEND and Townsend and Crew LLP
APPLICANT: Shay, Jerry W.
APPLICANT: Wright, Woodring E.
APPLICANT: Wright, Woodring E.
APPLICANT: Corey, David
APPLICANT: Corey, David
APPLICANT: No. 6015710ton, James C.
TITLE OF INVENTION: Modulation of Mammalian Telomerase by
TITLE OF INVENTION: Peptide Nucleic Acids
NUMBER OF SEQUENCES: 46
CORRESPONDENCE ADDRESS:
ADDRESSER: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STATE: California

; Sequence 2, Application US/08838545
; Patent No. 6046307
; GENERAL INFORMATION:
    APPLICANT: Wright, Woodring E.
    APPLICANT: Piatyszek, Mieczyslaw A.
    APPLICANT: Orey, David R.
    APPLICANT: No. 6046307ton, James C.
    TITLE OF INVENTION: Modulation of Mammalian Telomerase by ITILE OF INVENTION: Peptide Nucleic Acids
    NUMBER OF SEQUENCES: 60
    CORRESPONDENCE ADDRESS: 6
    CORRESPONDENCE ADDRESS: 7
    ADDRESSEE: Townsend and Townsend and Crew LLP
    STREET: Two Embarcadero Center, Eighth Floor
    CITY: San Francisco
    STARET: California
                                                                                LENGTH: 15 base pairs

TYPE: nucleic acid

TYPE: nucleic acid

TYPOLOGY: linear

MOLECULE TYPE: other nucleic acid

DESCRIPTION: /desc = "phosphorothioate (PS) nucleic acid"

Patent No. 6294650

GENERAL INPORMATION:
APPLICANT: Shay, Jarry W.
APPLICANT: Wright, Woodring E.
APPLICANT: Wright, Woodring E.
APPLICANT: Diatyszek, Mieczyslaw A.
APPLICANT: Orey, David R.
APPLICANT: No. 6294650ton, James C.
TITLE OF INVENTION: Modulation of Mammalian Telomerase by TITLE OF INVENTION: Peptide Nucleic Acids
NUMBER OF SEQUENCES: 6

US-09-349-532-1/C

Sequence 1, Application US/09349532

Patent No. 6294650

GENERAL INFORMATION:
APPLICANT: Shay, Jerry W.
APPLICANT: Piatyszek, Mieczyslaw A.
APPLICANT: Piatyszek, Mieczyslaw A.
APPLICANT: Ocrey, David R.
TITLE OF INVENTION: Modulation of Mammalian Telomerase by TITLE OF INVENTION: Peptide Nucleic Acids
NUMBER OF SEQUENCES: 60

CORRESPONDENCE ADDRESS:

No. 1.7e+02; Matches 13; Conservative 0; Mismatches 0; Indels
COMPUTER: IBM PC compatible
SOFTWARE: Patentin Release #1.0, Version #1.30
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/838,545
FILING DATE: 09-APR-1997
CLASSIFICATION DATA:
APPLICATION NUMBER: US 08/630,019
FILING DATE: 00-APR-1996
ATORNEY AGENT INFORMATION:
NAME: Storella, John R.
REFERENCE/DOCKET NUMBER: 015389-001610US
TELEPHONE: (415) 576-0300
INFORMATION FOR SEQ ID NO: 56:
SEQUENCE CHARACTERISTICS:
LEBROTH: 13 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SOFTWARE: Patentin Release #1.0, Version #1.30 CURRENT APPLICATION DATA:

Patent No. 6294650

GENERAL INFORMATION:
APPLICANT: Shay, Jerry W.
APPLICANT: Platyszek, Mieczyslaw A.
APPLICANT: Platyszek, Mieczyslaw A.
APPLICANT: No. 6294650ton, James C.
TITLE OF INVENTION: Modulation of Mammalian Telomerase by TITLE OF INVENTION: Peptide Nucleic Acids
NUMBER OF SEQUENCES:
CRRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP

GENERAL INFORMATION:

APPLICANT: RESNICK, NITZAN

TITLE OF INVENTION: EXPRESSION VECTORS COMPRISING MULTIPLE SHEAR STRESS

TITLE OF INVENTION: TREAPONSIVE ELEMENTS (SSRE) AND METHODS OF USE FOR

TITLE OF INVENTION: ANGIOGENESIS IN A SHEAR STRESS ENVIRONMENT

FILE REFERENCE: P-2771-US

CURRENT APPLICATION NUMBER: US/09/220,510B

CURRENT PILING DATE: 1998-12-24

NUMBER OF SEQ ID NOS: 6

/desc = "peptide nucleic acid (PNA),
where (deoxy/tibose-phosphate linkages are replaced by
N-(2-aminoethy/) glycine units linked to nucleotide bases via
glycine amino N through a methylenecarbonyl linker"
                                                                                                                                 .

Patent No. 6294650
GENERAL INFORMATION:
APPLICANT: Shay, Jerry W.
APPLICANT: Shay, Woodring E.
APPLICANT: Platyszek, Mieczyslaw A.
APPLICANT: No. 6294650ton, James C.
ITILE OF INVENTION: Modulation of Mammalian Telomerase by ITILE OF INVENTION: Peptide Nucleic Acids
ITILE OF INVENTION: Peptide Nucleic Acids
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
ADDRESSER: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STREET: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2.6%; Score 11.8; DB 1; Length 15; 46.7%; Pred. No. 2.3e+02; tive 6; Mismatches 2; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                US-08-292-620A-292/C

Sequence 292, Application US/08292620A

Patent No. 5837542

GENERAL INFORMATION:
APPLICANT: Susan Grimm
APPLICANT: James McSwiggen
APPLICANT: Sean Sullivan
APPLICANT: Sean Sullivan
APPLICANT: Renneth G. Draper
TITLE OF INVENTION: RIBOZYME TREATMENT OF
TITLE OF INVENTION: RIBOZYME OF LITLE OF INVENTION: RELATED TO LEVELS OF
TITLE OF INVENTION: NUTRACELLULAR ADHESTON
TITLE OF INVENTION: MOLECULE-1 (I-CAM-1)
                                                                                                                                                                                                                                                             US-08-470-887A-10; Sequence 10, Application US/08470887A; Patent No. 5820871
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MOLECULE TYPE: RNA (genomic)
